RESEARCH FIELDS

Macro-Finance, Financial Economics, International Finance

EDUCATION

Ph.D. Economics Sept. 2021 – May 2027*
Boston College, USA

MA Economics Sept. 2021 – Dec. 2022
Boston College, USA

M.Sc. Models and Methods of Quantitative Economics Sept. 2018 – Jul. 2020
Universitat Autònoma de Barcelona, Spain
Université Paris 1 Panthéon Sorbonne, France
Ca' Foscari University of Venice, Italy
UC Louvain, Belgium

BA Politics, Philosophy and Economics Sept. 2015 – Jul. 2018
Ca' Foscari University of Venice, Italy
Erasmus Exchange, University of Adelaide, Australia

WORK EXPERIENCE

Research Consultant (unpaid) - European Central Bank, DG Research, Germany Jan. 2026 - today

Research Analyst - European Central Bank, DG Monetary Policy, Germany Jun. 2025 - Dec. 2025

Ph.D. Internship - European Central Bank, DG Macroprudential Policy, Germany Jun. 2024 - Dec. 2024

Ph.D. Fund Internship - International Monetary Fund, Research Department, USA Jun. 2023 - Aug. 2023

Pre-Doc Research Assistant - European Central Bank, DG Research, Germany Aug. 2020 - Aug. 2021

WORKING PAPERS

Job Market Paper **The Maturity Insurance Channel of Monetary Transmission**
with F. Barbiero (ECB)

Abstract How does endogenous corporate debt maturity shape monetary transmission? We show that it depends on the composition of long-term interest rates. Using euro-area credit-registry data, we find that firms with greater refinancing needs borrow at relatively longer maturities when expected future short rates rise, but relatively shorter maturities when term premia increase. Our empirical design exploits predetermined repayment schedules, within-bank-month comparisons, and monetary-policy surprises. A heterogeneous-firm model with financial frictions reproduces these untargeted differential responses and shows that maturity flexibility mitigates investment contractions and reduces default following news of higher future rates. The investment benefits of maturity flexibility are even greater when expected-rate news coincides with a higher term premium. Applying the model to the euro-area 2022-24 tightening cycle illustrates how earlier maturity adjustment mitigates investment losses and default without additional deleveraging. Together, these findings establish a maturity-insurance channel of monetary transmission whose real effects depend on both the cost of long-term financing and firms' inherited refinancing obligations.

Global Uncertainty, Local Credit: The Bank Lending Channel of International Spillovers
with M. Behn, C. Mendicino, A. Reghezza (all ECB) & D. Supera (Columbia Business School)

Abstract Uncertainty about U.S. policy crosses borders through global banks. Matching supervisory data on euro area banks' U.S. exposures with the credit register, we exploit predetermined bank-level US exposure around the U.S. presidential elections and the time series variation of U.S. Economic and Policy uncertainty (EPU). Within the same firm and quarter, banks at the 75th versus 25th percentile of US asset exposure cut new lending at home by 9 percent after the 2024 presidential election, charge higher rates, shorten maturities, and reallocate their portfolio toward government EA securities. Effects are larger for banks with weak balance sheet characteristics and predict lower investment and employment at firms with indirect U.S. exposure via their banks. We don't find similar findings in events in which US EPU uncertainty does not rise.

Bank Capital Regulation, Production Networks, and the Supply of Corporate Credit
with M. Giannetti (Stockholm School of Economics), M. Jasova (Barnard College), C. Mendicino (ECB) & D. Supera (CBS)

Abstract. This paper studies how tighter bank capital regulation reshapes the allocation of credit across banks, firms, and non-bank financial intermediaries. We exploit the staggered introduction of positive countercyclical capital buffers (CCyB) across euro-area countries in 2022 as a quasi-natural experiment. Banks more exposed to higher capital requirements significantly contract credit supply, particularly to smaller and riskier firms. While bank lending declines, affected firms substitute for alternative sources of finance. These include trade credit and non-bank lending. Using granular credit register data matched with firm balance sheets and production-network information, we document that large firms partially absorb the contraction in bank credit by extending more trade credit to financially constrained customers. Corporate-affiliated non-bank financial institutions also expand lending to riskier borrowers, contributing to the financialization of large firms. As a result, macroprudential tightening alters not only the volume but also the composition of credit. Intermediation is reallocated from regulated banks toward firms and non-bank lenders within production networks. These findings highlight a key transmission channel of capital regulation operating through interfirm relationships and non-bank intermediation.

Currency Mismatch under Earnings-Based Borrowing
with M. Hakamada (Freddie Mac) & T. Schulze (IMF)

Abstract. The conventional measure of corporate currency mismatch (FX) is incomplete when non-financial firms borrow against their earnings following an exchange rate depreciation. In a two-sector small open economy model with dominant-currency pricing, an exchange rate depreciation tightens the non-tradable producer's borrowing constraint even at a zero dollar-debt share. We derive a closed-form earnings-adjusted FX measure that is the net dollar operating exposure relative to pledgeable earnings. Because exchange rates and pledgeable earnings respond jointly to shocks, depreciations of the same size can have opposite effects on borrowing capacity depending on their source—an increase in the foreign monetary policy rate tightens borrowing constraints, whereas a fall in export demand can relax them—which may help explain why empirical studies find mixed evidence on whether exchange rate depreciations are contractionary.

TEACHING EXPERIENCE

Teaching Assistant of Principle of Economics, Undergraduate	Spring 2026
Teaching Fellow of International Finance, Undergraduate	Summer 2025
Teaching Assistant of Macroeconomics II, Ph.D.	Spring 2025
Teaching Assistant of Statistics, Undergraduate	Spring 2024
Teaching Assistant of Macroeconomics I, Ph.D.	Fall 2023

HONORS, FELLOWSHIPS, AWARDS

FED Board, USA Summer Dissertation Fellowship 2026

Boston College, USA GSA Annual Dissertation Fellowship 2026/2027 & Summer Dissertation Fellowship 2024

BIS, Switzerland Summer Dissertation Fellowship 2024 (declined)

Université Paris 1 Panthéon Sorbonne, France Erasmus Mundus Consortium Fellowship & Honors Master Thesis

Ca' Foscari University of Venice, Italy Erasmus Grant & Honors Bachelor Thesis

TECHNICAL SKILLS & PERSONAL

Languages	English (advanced C1), Italian (native), French (beginner A2)
Programming	STATA, Python, MATLAB, Latex
Citizenship	Italian, F1 US VISA
