Education

Boston College USA <i>Ph.D. Candidate in Economics</i>	<i>Sept 2021 – May 2026 (expected)</i>
◦ Fields: Macroeconomics and International Finance	
◦ Dissertation "Essays on Credit Frictions and Firms Heterogeneity"	
Boston College USA <i>M.Sc. Econometrics and Applied Economics GPA: 4/4</i>	<i>Sept 2021 – Dec 2022</i>
Joint Degree Universitat Autònoma de Barcelona, Université Paris 1 Panthéon Sorbonne, Ca' Foscari University of Venice <i>M.Sc. Models and Methods of Quantitative Economics GPA: 3.75/4</i>	<i>Sept 2018 – July 2020</i>
Ca' Foscari University of Venice ITALY <i>B.A. Philosophy, International Studies and Economics GPA: 4/4</i>	<i>Sept 2015 – July 2018</i>

Work Experience

Research Consultant <i>European Central Bank - DG Macroeconomic Policy and Financial Stability</i>	<i>Frankfurt, Germany Feb. 2025 - today</i>
Ph.D. Traineeship <i>European Central Bank - DG Macroeconomic Policy and Financial Stability</i>	<i>Frankfurt, Germany May 2024 – Jan. 2025</i>
◦ Main Task: empirical research project on how US uncertainty and the bank lending channel.	
FIP Ph.D. Internship <i>International Monetary Fund - Research Department</i>	<i>Washington DC, USA June 2023 – Aug 2023</i>
◦ Main Task: theoretical research project on borrowing constraints and FX mismatch of EM firms.	
Master Traineeship <i>European Central Bank - DG Research</i>	<i>Frankfurt, Germany Aug 2020 – Aug 2021</i>
◦ Main tasks: build and maintain financial databases, develop statistical, econometric and programming procedures, and supporting economists in research projects.	

Working Papers

FX Mismatch, Borrowing Constraints and Real Effects <i>Bozzelli G, Hakamada M. and Schulze T.</i>	<i>Dec. 2024, TBA </i>
---	---

The paper delves into how the presence of currency mismatch in earnings-borrowing constraints (EBC, henceforth) influences the dynamics of the financial accelerator and the trade-offs faced by monetary policy in developing countries. We enhance a small open economy model with financial frictions inspired by Jermann & Quadrini (2012), incorporating currency mismatch in cash flows instead of stocks, and adopting dominant currency pricing, wherein firms choose sticky USD prices following Gopinath et al. (2020). We calibrate the model to represent a typical emerging country. Through quantitative analysis, we illustrate that following a foreign exchange depreciation, EBCs amplify the adverse impact on firms' debt compared to traditional asset-borrowing constraints. The presence of financial frictions elucidates the dampening effect on key aggregate real variables like consumption, investment, and GDP.

Work in Progress

Supply Chain Disruptions and Macroprudential Policy

Dec. 2024

Bozzelli G, Giannetti M, Mendicino C. and Supera, D.

This project examines a unique wave of countercyclical capital buffer (CCyB) policy activated in Germany, France, Ireland, and the Netherlands in 2022. By analyzing banks' ex-ante credit exposure to the treatment, we demonstrate that tightening capital requirements affects the credit supply of banks more significantly when they are more exposed to the activating country. Additionally, we show that larger, less risky firms, which are more exposed to the affected banks, extend more trade credit to their customers. The authors are now working to extend this analysis using firm-level customer-supplier network data.

Ripple Effects of US Uncertainty and the Bank Lending Channel

Dec. 2024

Bozzelli G, Bhen M, Mendicino C. and Supera, D.

This empirical project examines how the US economic and policy uncertainty (EPU) transmits to the Euro-Area via banks. By combining loan-level credit-registry data with financial banking data, we found that Euro-Area banks most exposed to the US, via credit to non-financial corporations or deposits in US banks, reduced lending at home by 1.80 percent following a one standard deviation increase in the US EPU between 2014-2023.

Teaching

Teaching Assistant of Macroeconomics II, PhD level, Boston College USA

Spring 2024

Teaching Assistant of Macroeconomics I, PhD level, Boston College USA

Fall 2023

Teaching Assistant of Statistics Undergraduate, Boston College USA

Spring 2023

Skills

Languages: English (advanced C1), Italian (native), French (intermediate B1)

Programming: MATLAB and STATA (Excellent); Python, R (Good); C++, Julia (Basic)

Job-related: Excellent organizational skills and problem-solving skills, ability to cope with a stressful situation with positivism, adaptability, and excellent communication skills
